Change History

| Date | Version | Updated content |
|------------|---------|-----------------|
| 12/01/2022 | 1.0 | Initial Version |

Overview

This document aims to guide the developer in the use of available operating interfaces that allow operating the ITSCAMPRO 1.11.2 software, being the software responsible for the management of the information produced, with the objective of monitoring vehicles through automatic license plate reading (LPR) or general characteristics of the vehicle, in addition to detecting dangerous loads transported. If you have any questions, please contact Pumatronix technical support.

According to the firmware version applied to the device accessed, the web access interface is differentiated and some functions can be made available only in the most current versions.

Table of Contents

| 5. | Search by Plate | 47 |

1. ITSCAMPRO Web Interface

The home screen of the ITSCAMPRO web interface has the functions always visible and available for access and displays the Mosaic, when configured as the home page of the logged in User, with the latest captures made by the registered devices, which are presented in mosaic format, configured for the selected size: 1x1, 2x2x, 3x3, 4x4, 5x5 or 6x6.

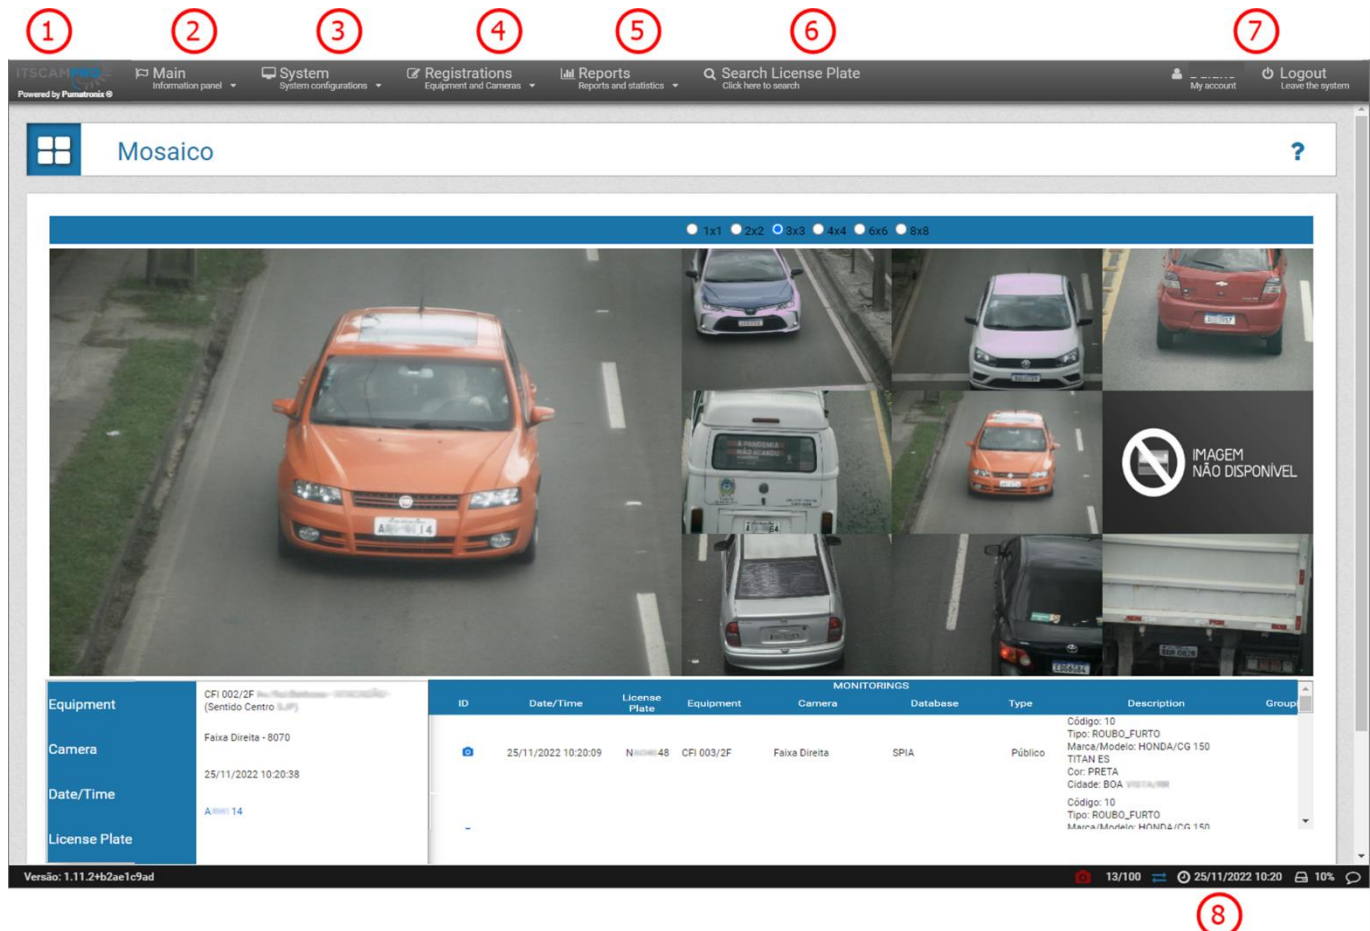

Figure 1 - Features available in the interface: 1) Access to the home page, 2) Main Menu, 3) System Menu, 4) Registration Menu, 5) Reports Menu, 6) Search Plate Function, 7) User Account Data and Logout, 8) Status Bar

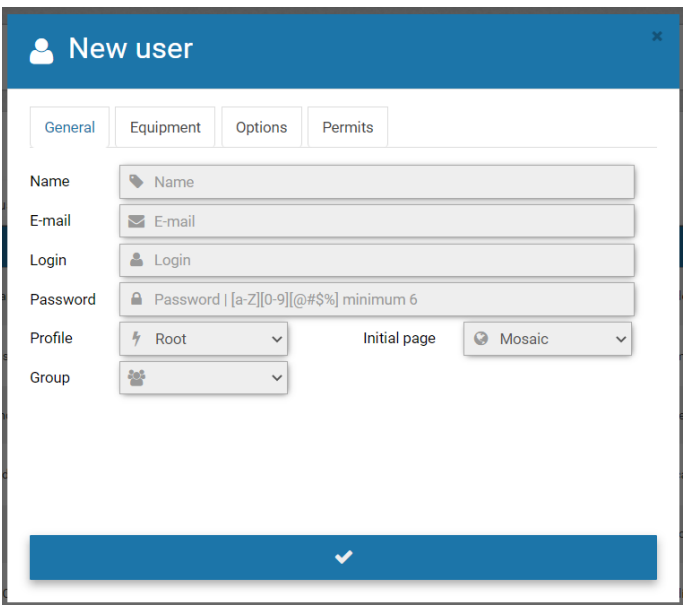

2. System Menu

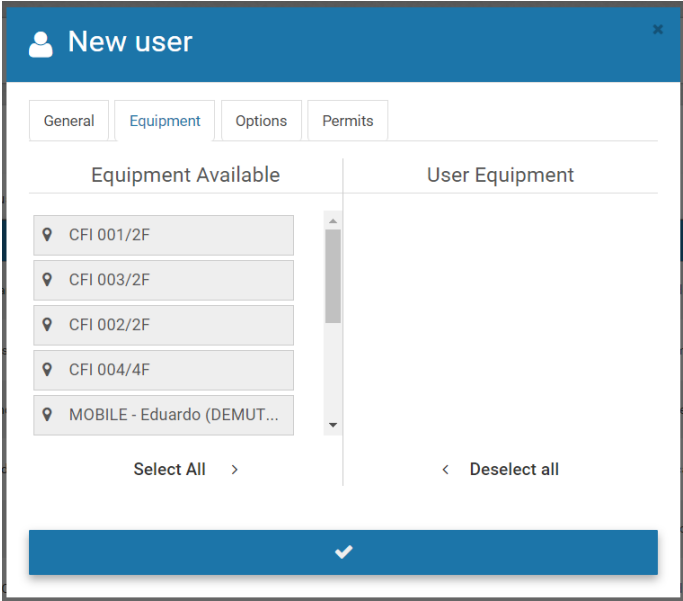

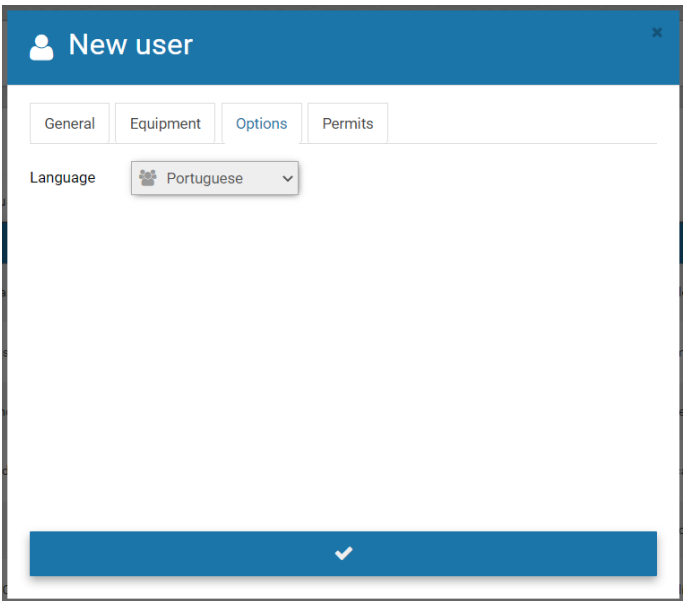

Users

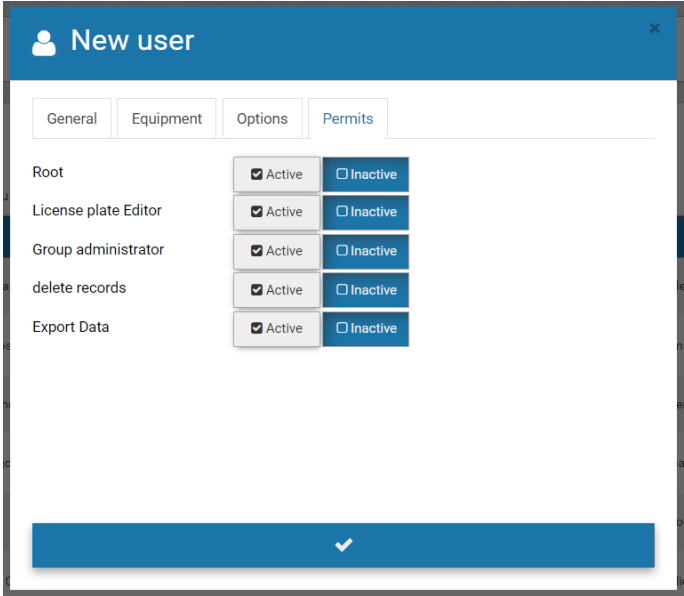

ITSCAMPRO allows the control of access to equipment independently by User *Groups* and allows different access levels to be made available to each user of the system, it is possible to register a user with full permission to access the system (*Root Profile*) and a user with restricted access to some reports and Monitoring of vehicles and traffic (*Operator*).

| Users | | | | | | |
|--|-------------------|------------------------|---------------------------------|-----------------|------------|---------|
| <input type="text"/> 10 Received total of 14 user. Presenting (1 up to 10) | | | | | | |
| Profile | Group | Name | E-mail | Login | Language | Actions |
| Administrador | GERAL | Software Development | felipe@pumatronix.com.br | dev.software | Portuguese | |
| Convidado | Comercial | Marcos Vinicius Boeira | marcos.boeira@pumatronix.com.br | marcos.boeira | Portuguese | |
| Coordenador | Prefeitura de SJP | Fernanda Bastos | fernanda.bastos@sjp.pr.gov.br | fernanda.bastos | Portuguese | |
| Coordenador | GERAL | carbigdata | Não Cadastrado | carbigdata | Portuguese | |
| Root | GERAL | Root | Não Cadastrado | root | Portuguese | |
| Root | GERAL | Diego Charlau Oku | diego.charlau@pumatronix.com.br | diego.charlau | Portuguese | |

| Root | Prefeitura de SJP | Eduardo Umbria | eduardo.umbria@sjp.pr.gov.br | eduardo.umbria | Portuguese | |

To add a new user, click *+New User* and the screen displays the fields for completion, separated into four tabs:

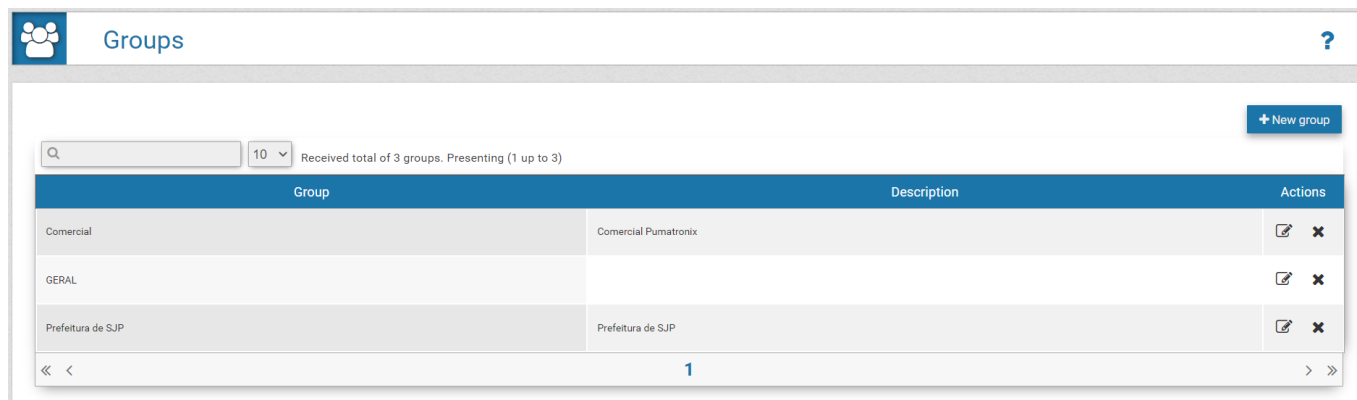

| Field | Description |
|--------------------|--|
| General Tab |  |
| <i>Name</i> | required to create a name for user identification |
| <i>E-mail</i> | register a user email to send system data |
| <i>Login</i> | required to enter data to log in |
| <i>Password</i> | obrigatório inserir a senha de acesso para realizar o login |
| <i>Profile</i> | select a profile that contains the access permissions to the desired screens |
| <i>Home Page</i> | select what will be the home page displayed after login |
| <i>Group</i> | select a <i>Group</i> that will associate the equipment and monitoring list of the group with the user |

| Field | Description |
|----------------------------|--|
| Equipment Tab |  |
| <i>Available Equipment</i> | select which equipment the user will have access to and drag to the <i>User Equipment</i> column to allow access |
| <i>User Equipment</i> | view/remove equipment that the user can access |
| Options Tab |  |
| <i>Language</i> | select the display language of the interface for the user, among the possible: <i>Portuguese, English or Spanish</i> |

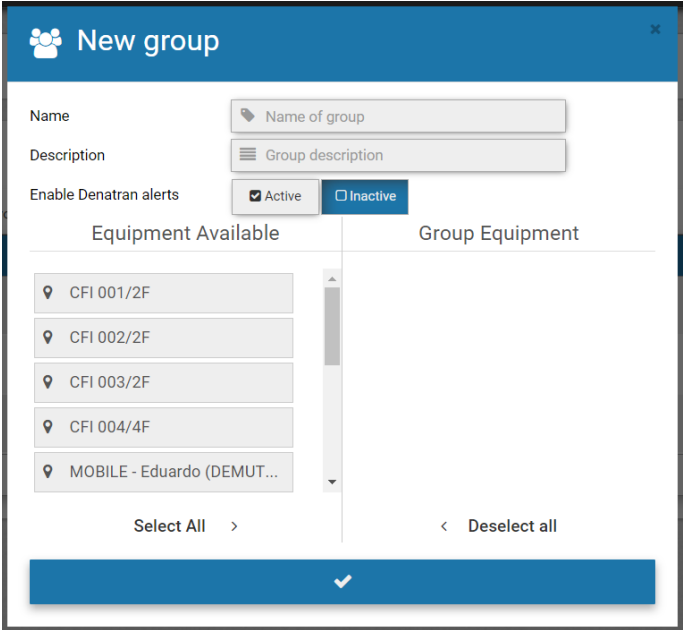

| Field | Description |
|-----------------------------|--|
| Permissions Tab |  |
| <i>Root</i> | the user with the <i>Root</i> permission is the primary administrator of the system. In addition to being able to configure the groups and user, Root is allowed to do server administration tasks |
| <i>License Plate Editor</i> | the user with this permission can change the plate information detected in the records |
| <i>Group Admin</i> | the user with <i>Group Administrator</i> permission, can make changes to the group capture equipment and device settings, and can manage the monitored vehicles |
| <i>Delete Records</i> | select whether the user has permission to delete system records |
| <i>Export Data</i> | select whether the user has permission to export system record data |

Groups

The User Groups setting aims to restrict access to equipment and the list of monitored vehicles when associating created users. Likewise, it allows to restrict access to the captures made only by the equipment that belongs to the group associated with the user.

To add a new user, click *+New Group* and the screen displays the fields to fill in:

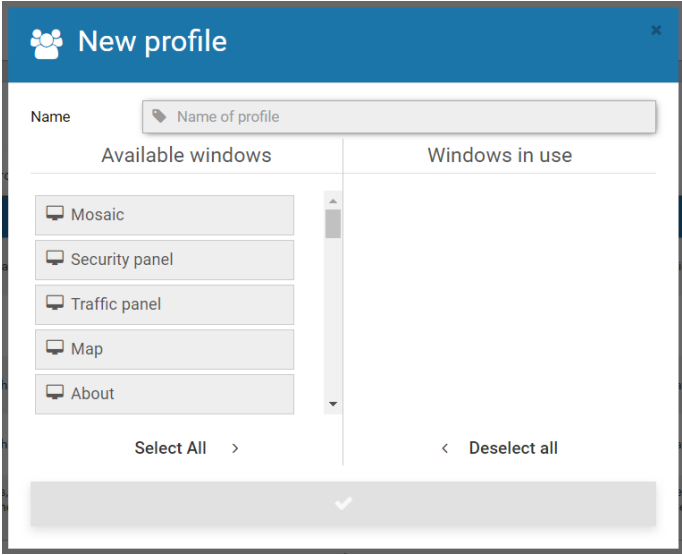

| Field | Description |
|-------------------------------|---|
| |  |
| <i>Name</i> | required to create a name for group identification |
| <i>Description</i> | enter group description |
| <i>Enable Denatran Alerts</i> | select whether Denatran alerts for the group will be <i>Active</i> or <i>Inactive</i> |
| <i>Available Equipment</i> | select which equipment is released for group access and drag to the <i>Group Equipment</i> column to allow access |
| <i>Group Equipment</i> | view/remove equipment that the group can access |

Profiles

The *Profiles* configuration aims to restrict access to the ITSCAMPRO System screens by associating with *Users* or *Groups*. By default, users with a *Root* profile can search the Vehicle Monitoring in user groups other than the one with which it is associated.

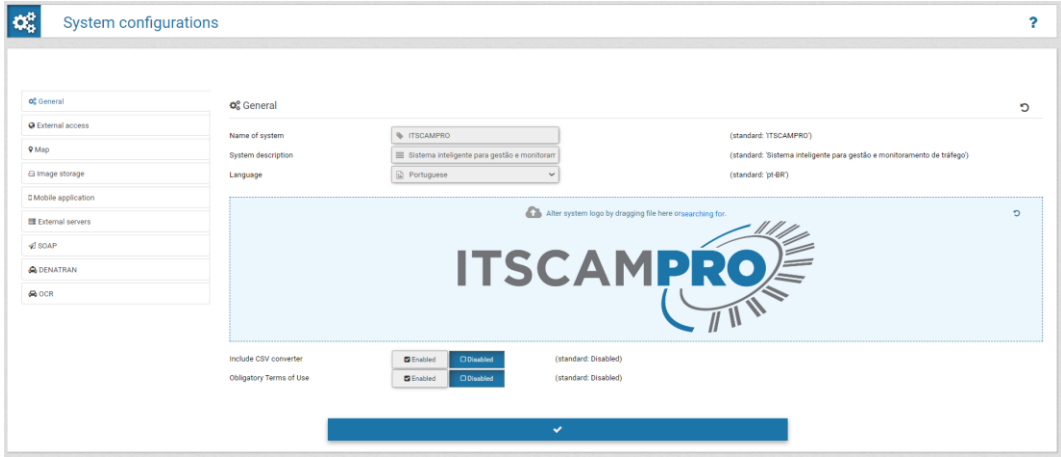

| Profiles | | | ? |
|--|---|---------|-------------------------------|
| <input type="text"/> 10 Received total of 5 profiles. Presenting (1 up to 5) | | | + New profile |
| Name | Windows | Actions | |
| Administrador | Mosaic, Security panel, Traffic panel, Map, About, Equipment, Cameras, Monitored vehicles, Monitored roads, Monitoring Vehicle, Correlations, Registers, Traffic Volume, Speed & Time, Origin and Destination, Altered license plates, Search License Plate | | |
| Convidado | Registers | | |
| Coordenador | Mosaic, Security panel, Traffic panel, Map, About, Monitored vehicles, Monitoring Vehicle, Correlations, Registers, Traffic Volume, Speed & Time, Origin and Destination, Search License Plate | | |
| Operador | Mosaic, Security panel, Traffic panel, Map, About, Monitored vehicles, Monitoring Vehicle, Correlations, Registers, Traffic Volume, Speed & Time, Origin and Destination, Search License Plate | | |
| Root | Mosaic, Security panel, Traffic panel, Map, About, Users, Groups, Profiles, System configurations, Date / Time configurations, Network configurations, Email server, License, System maintenance, Equipment, Cameras, Monitored vehicles, Monitored roads, Monitoring Vehicle, Correlations, Registers, Traffic Volume, Speed & Time, Origin and Destination, Altered license plates, System Log, Search License Plate, Notifications, Devices, Search for similarity, Grouping, Search for similarity, Dangerous Goods | | |
| <div> <div><< <</div> <div>1</div> <div>> >></div> </div> | | | |

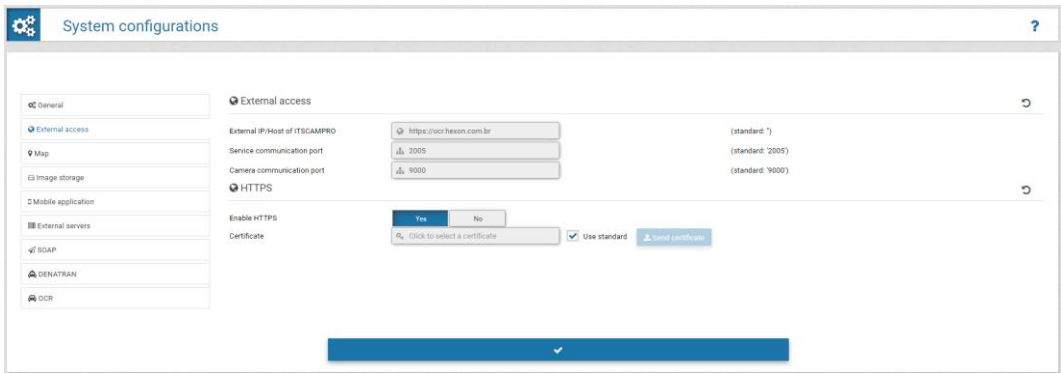

To add a new user, click *+New Profile* and the screen displays the fields to fill in:

| Field | Description |
|--------------------------|--|
| |  |
| <i>Name</i> | required to create a name for profile ID |
| <i>Available Screens</i> | select which screens are allowed for profile access and drag to the <i>Screens in use</i> column to allow access |
| <i>Screens in Use</i> | view/remove the allowed screens for the <i>Profile</i> |

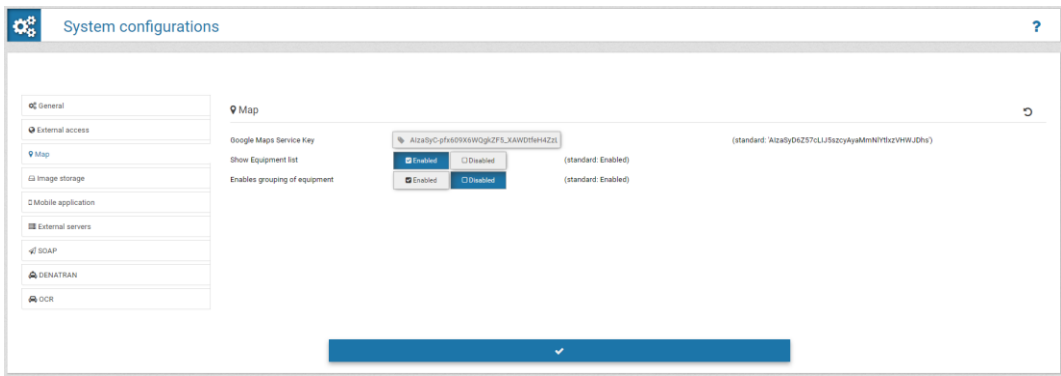

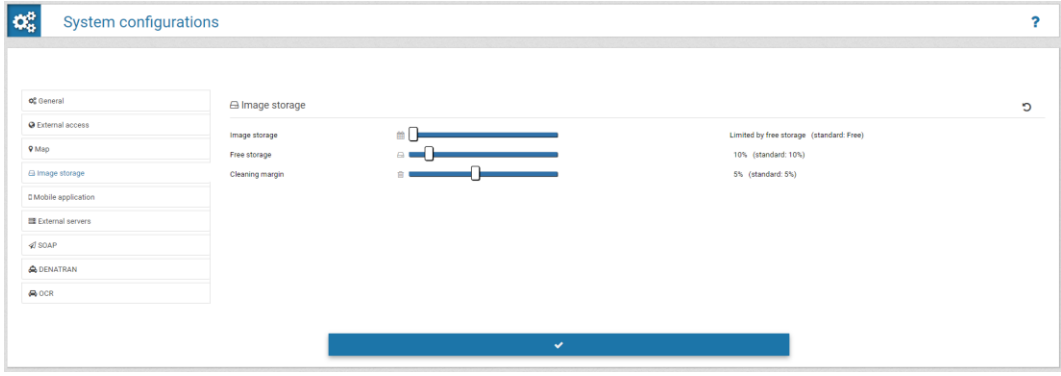

System Settings

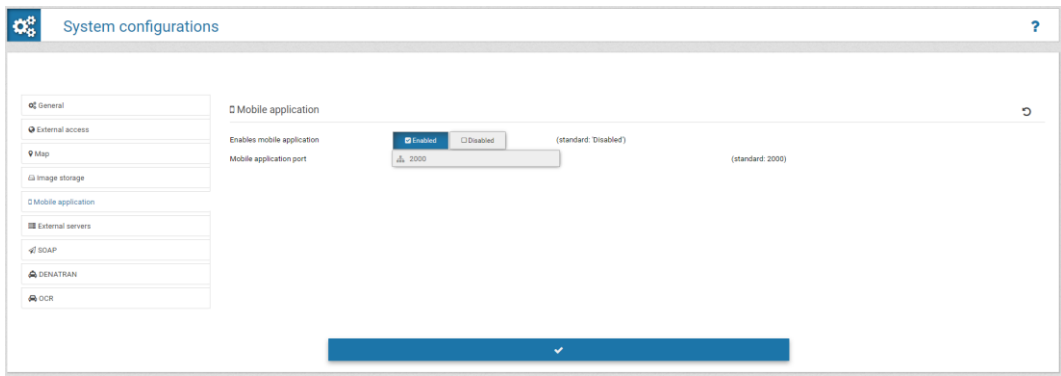

The operation and functioning of the ITSCAMPRO System in various environments and infrastructure requires that the *System Settings* are correctly applied in the fields described:

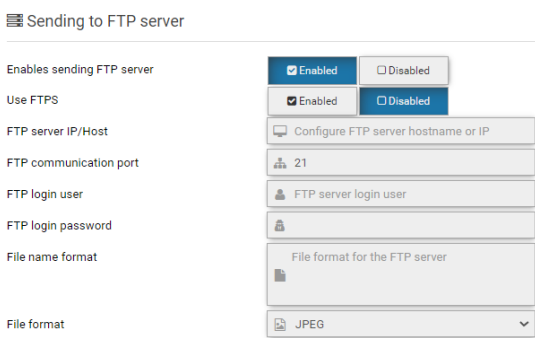

| Field | Description |
|------------------------------|--|
| General Tab |  |
| <i>System Name</i> | enter the name that will be displayed on the system login and access home screen |
| <i>System Description</i> | enter brief description to be displayed on the system login and access home screen |
| <i>Language</i> | select the display language of the interface |
| <i>System Logo</i> | change the system logo by inserting the image to be displayed on the login screen |
| <i>Include CSV converter</i> | select whether the CSV converter will be <i>Enabled</i> or <i>Disabled</i> |
| <i>Term of Mandatory Use</i> | select whether the Mandatory Use Term will be <i>Enabled</i> or <i>Disabled</i> |

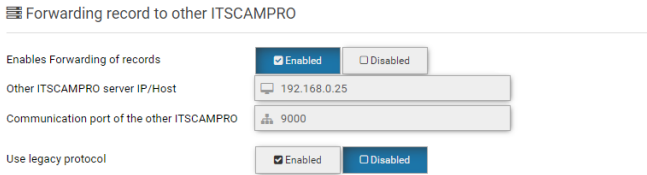

| Field | Description |
|-----------------------------------|---|
| External Access Tab |  <p>As ITSCAMPRO may be behind a NAT, it is possible to configure some of the ports used in communication with the service.</p> |
| <i>ITSCAMPRO IP/External Host</i> | enter the external IP or internet address where ITSCAMPRO will be visible on the internet since it is possible for the system to be accessed from outside the company intranet. This setting is very important for automatic status updates |
| <i>Service Communication Port</i> | enter communication port that the system must use to communicate with the ITSCAMPRO service for monitoring. In the case of an external access, it is necessary to include the forward network of that port to the server IP |

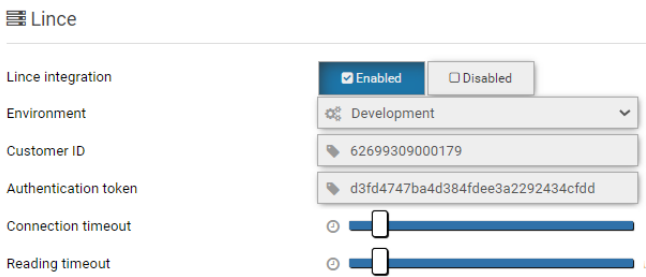

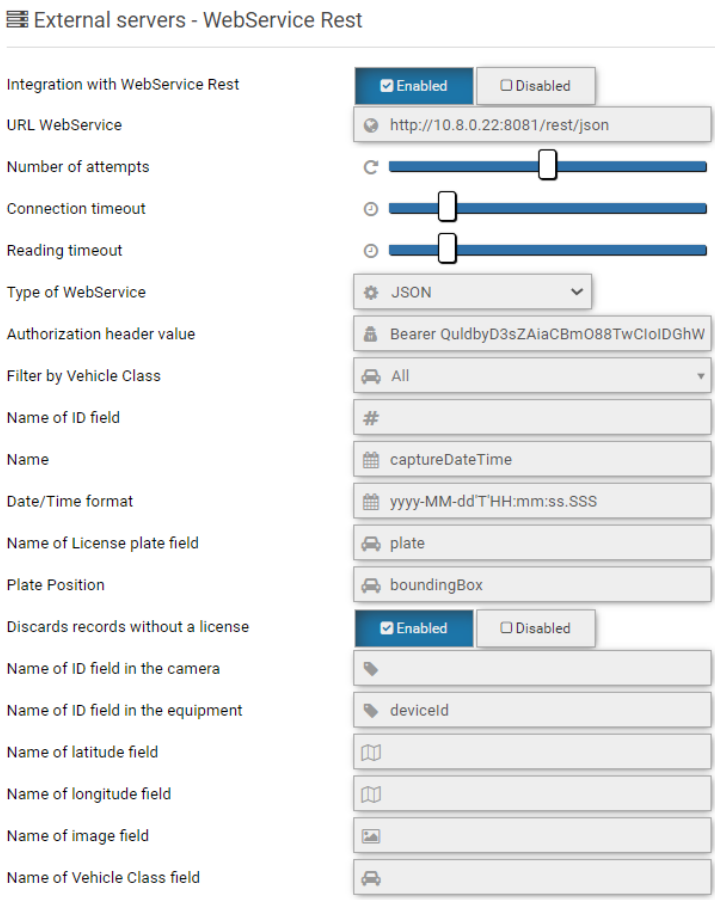

| Field | Description |
|-----------------------------------|--|
| <i>Cameras Communication Port</i> | enter port through which capture devices and equipment such as WetecFF and ITSCAMPRO Mobile will send the captures to the ITSCAMPRO server |
| <i>Enable HTTPS</i> | select whether the use of the HTTPS protocol in the graphical interface will be enabled |
| <i>Certificate</i> | click on the field to load the external certificate file or select Use default and the certificate |

| Field | Description |
|----------------------------------|---|
| Map Tab |  |
| <i>Google Map Service Key</i> | enter <i>Google Maps Services Access Key</i> |
| <i>Show Equipment List</i> | select whether the list of equipment in the Map view will be <i>Enabled</i> or <i>Disabled</i> |
| <i>Enables Equipment Pooling</i> | select whether the functionality of grouping the nearby equipment in the Map view will be <i>Enabled</i> or <i>Disabled</i> |
| Image Storage Tab |  |
| <i>Image Storage</i> | set the time that the images will remain in ITSCAMPRO, which allows to keep the storage from 3 months up to 2 years or <i>Limited by Free Storage</i> , which removes the stored images considering the <i>Free Storage configuration</i> |
| <i>Free Storage</i> | set the minimum free HD space that should be maintained in the system, which can be 5% to 50% |
| <i>Cleaning Margin</i> | configure the margin (from 1% to 10%) that must be maintained with each HD cleaning operation, to prevent the system from cleaning with each new image when reaching the minimum HD limit |

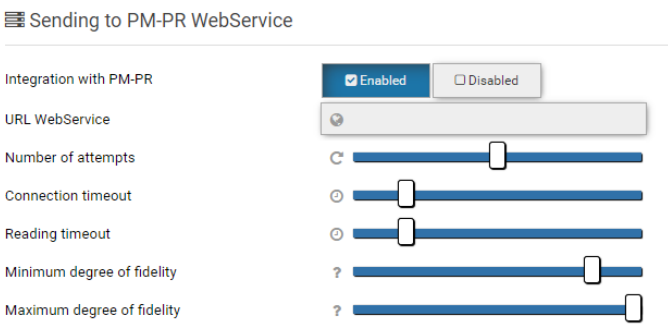

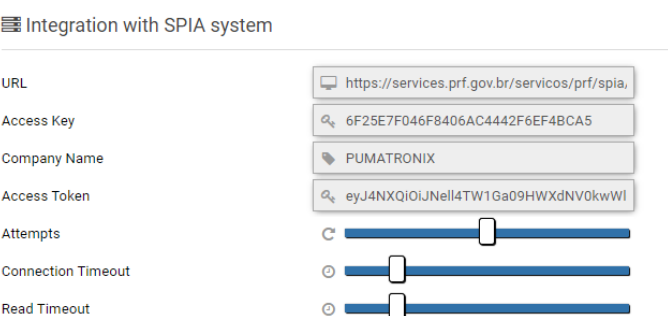

| Field | Description |
|-------------------------------|--|
| Mobile Application Tab |  <p>Access to ITSCAMPRO can be done using Android application.</p> |
| <i>Enable Mobile App</i> | select whether integration with the mobile application will be <i>Enabled</i> or <i>Disabled</i> |
| <i>Mobile App Port</i> | configure the port that will be used for communication with the mobile application |

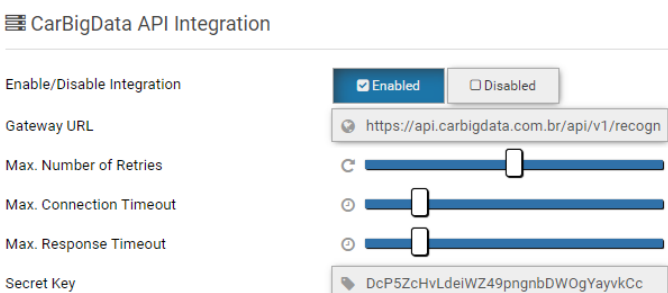

| Field | Description |
|--|---|
| External Servers tab > Sending to FTP Server |  |
| <i>Enables FTP Server Sending</i> | select whether sending to FTP server will be <i>Enabled</i> or <i>Disabled</i> |
| <i>Use FTPS</i> | select whether the use of FTPS will be <i>Enabled</i> or <i>Disabled</i> . When enabled ITSCAMPRO will use FTPS instead of unsecured FTP |
| <i>IP/Host FTP Server</i> | configure the IP address or HostName of the server to be sent |
| <i>FTP Communication Port</i> | enter the port that should be used in communication with the FTP server |
| <i>FTP Login User</i> | enter user to login to FTP server |
| <i>FTP Login Password</i> | enter password for FTP server login |
| <i>Format File Name</i> | customize the format that the files will be saved on the FTP server. <ul style="list-style-type: none"> <i>cameraname</i>: The tag allows you to use the camera name in the file <i>cameratyp</i>: The tag allows using the camera type in the file path, differentiating when it is a front camera ('D') from a rear camera ('T') <i>captureid</i>: The tag is exchanged for the capture identifier. This integer can be formatted as well (ft. %010d - use 10 digits by putting 0 to complete) |

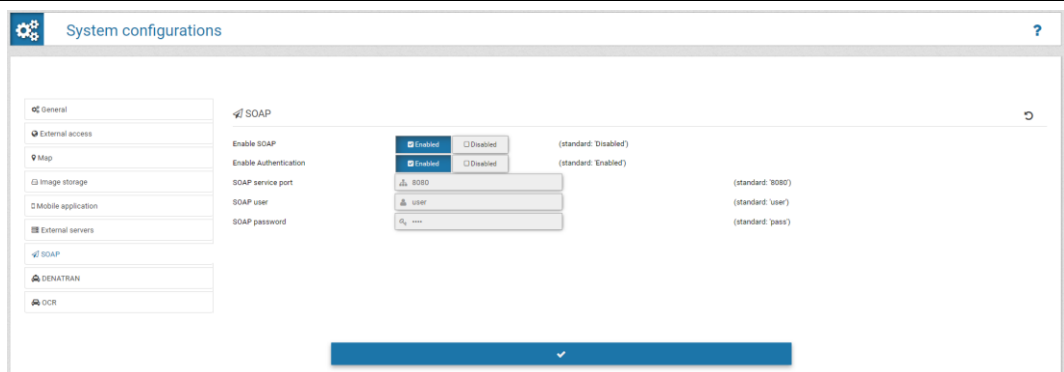

| Field | Description |
|--|---|
| | <ul style="list-style-type: none"> <i>datetime</i>: The tag can be used whenever it is necessary to include the date/time in the file name. This accepts the default date/time formatting fields (yyyy - year MM - month dd - day HH - time mm - minutes ss - seconds) <i>equipment</i>: The tag allows you to use the equipment identifier in the path of the file being saved on the FTP server <i>imageid</i>: The tag is exchanged for a unique image identifier <i>plate</i>: The tag is exchanged for the plate read by the OCR <i>probability</i>: The tag allows the user to put the overall probability of the plate in the name of the FTP file |
| File Type | <p>select the file format from the available formats:</p> <ul style="list-style-type: none"> <i>JPEG</i>: Standard system image format <i>PNG</i>: Vector format but with data compression <i>WEBP</i>: Vector format developed by Google with 26% more compression than PNG and 34% more compression than JPEG <p>The configuration of the FTP file format allows the user to customize the upload in a very flexible way, including creating directory trees.</p> <p>Example of configuration and generated file format:</p> <pre><datetime>yyyy</datetime>/ <datetime>MM</datetime> /<datetime>dd</datetime>/ <datetime>HHmmss</datetime> _<captureid>%10d</captureid>_ <plate>%s</plate>_ <imageid>%d</imageid>.jpg datetime: 20/05/2021 20:00:00 captureid: 1 plate: ABC1B34 expo: 1 2021/05/20/ 200000_0000000001_ABC1B34_1.jpg</pre> |
| External Servers tab > Forwarding records to another ITSCAMPRO |  |
| Enables Record Forwarding | select whether to <i>Enable</i> or <i>Disable</i> the forwarding of capture records to another ITSCAMPRO server |
| IP/Host from the other ITSCAMPRO server | configure IP or HostName to access the other ITSCAMPRO server |
| Communication port of the other ITSCAMPRO server | enter the communication port between ITSCAMPRO and the other ITSCAMPRO server |
| Use legacy protocol | select whether the use of the legacy protocol in the forwarding of records will be <i>Enabled</i> or <i>Disabled</i> |

| Field | Description |
|--|---|
| External Servers Tab > Lince |  |
| <i>Lince Integration</i> | select whether integration with the Lince server will be <i>Enabled</i> or <i>Disabled</i> |
| <i>Environment</i> | select server environment type |
| <i>Client Identifier</i> | enter customer identifier |
| <i>Authentication Code</i> | enter server authentication code |
| <i>Connection Timeout</i> | set the maximum time that will be expected for accepting a connection on the server |
| <i>Response Timeout</i> | set the maximum time that will be expected for receiving response from the server |
| External Servers tab > WebService Rest |  <p>In addition to access by application, the information obtained by ITSCAMPRO can be forwarded to an FTP (File Transfer Protocol) server, another ITSCAMPRO, Web Service Rest or other external servers that are configured.</p> |

| Field | Description |
|---|---|
| <i>WebService Rest integration</i> | select whether sending to a WebService Rest will be <i>Enabled</i> or <i>Disabled</i> |
| <i>WebService URL</i> | set WebService URL |
| <i>Number of Attempts</i> | set the number of attempts to send a record |
| <i>Connection Timeout</i> | set the maximum time the server will wait for a connection return |
| <i>Reading Timeout</i> | set the maximum time that the server will wait for a return of the information sent |
| <i>WebService Type</i> | select the type of data that will be sent and received in WebService that can be of type JSON or Multipart |
| <i>Authorization Header Value</i> | define the information that will be sent in the ' <i>Authorization</i> ' field in the <i>REST</i> request |
| <i>Filter by vehicle class</i> | select which vehicle classes will be routed to the WebService Rest that allows the options: <i>All, Unidentified, Car, Motorbike, Truck or Bus</i> |
| <i>ID Field Name</i> | set the name of the record identification field when sending to <i>WebService</i> . If the field is left blank this field will not be added on sending |
| <i>Field Name Date/Time</i> | customize the name of the date/time field when sending to <i>WebService</i> . If the field is left blank this field will not be added from sending |
| <i>Date/Time Format</i> | customize the format that will be sent the Date/Time |
| <i>Name Plate Field</i> | customize the name of the plate field when sending to <i>WebService</i> . If the field is left blank this field will not be added from sending |
| <i>Plate Position</i> | enter coordinates of the position where the plate was identified (x0,y0;x1,y1;x2,y2;x3,y3) |
| <i>Discard Registration without Plate</i> | select whether the discard of unmarked records will be <i>Enabled</i> or <i>Disabled</i> . When enabled, records without a plate will not be sent to WebService |
| <i>Camera ID Field Name</i> | customize the name of the capture/lane device identifier field. If the field is left blank this field will not be added on sending |
| <i>Equipment ID Field Name</i> | customize the name of the equipment identifier field. If the field is left blank this field will not be added on sending |
| <i>Latitude Field Name</i> | customize the name of the latitude field. If the field is left blank this field will not be added to sending |
| <i>Longitude Field Name</i> | customize the name of the longitude field. If the field is left blank this field will not be added to sending |
| <i>Image Field Name</i> | customize the name of the image field. If the field is left blank this field will not be added to sending |
| <i>Vehicle Class field name</i> | customize the <i>Vehicle Class Name</i> field when sending to <i>WebService</i> . If left blank, will not be added to sending |

| Field | Description |
|---|---|
| External Servers Tab > Submission to PM-PR Web Service |  <p>The ITSCAMPRO system allows integration with the PM-PR intelligence system. The PM-PR WebService needs the lane to be configured, the lane identification is configured in the External Identified field of the capture device. In addition to the lane identifier, the location and a valid plate are requirements for the records that are sent to the PM-PR.</p> |
| <i>Integration with PM-PR</i> | select whether integration with PM-PR will be <i>Enabled</i> or <i>Disabled</i> |
| <i>Web Service URL</i> | configure the URL that will be used to access the PM-PR <i>WebService</i> |
| <i>Number of Attempts</i> | set the maximum number of attempts to send a record to the PM-PR server |
| <i>Connection Timeout</i> | set the maximum time that will be expected for the acceptance of a connection on the server, between 0 to 60,000 milliseconds |
| <i>Reading Timeout</i> | set the maximum time that will be expected for receiving response from the server, between 0 to 60,000 milliseconds |
| <i>Minimum Degree of Loyalty</i> | define the minimum probability (between 0% and 100%) of the plate certainty so that ITSCAMPRO understands that the plate is valid and sends the image for validation. If the probability is lower, the image will not be sent in the record |
| <i>Maximum Degree of Loyalty</i> | define the minimum probability (between 0% and 100%) of the plate certainty so that ITSCAMPRO understands that the plate is valid and sends the image for validation. If the probability is higher, the image will not be sent in the record |
| External Servers Tab > Integration with the SPIA System (PRF) |  <p>The ITSCAMPRO system allows integration with the PRF intelligence system called SPIA. The SPIA-PRF WebService needs the lane to be configured, lane identification is configured in the External Identified field of the capture device. In addition to the lane identifier, location is one of the requirements for records that are sent to the SPIA-PRF.</p> |
| <i>URL</i> | enter the <i>URL</i> that will be used to access the SPIA-PRF <i>WebService</i> |
| <i>Access key</i> | enter the access key so that the PRF server accepts the system records |

| Field | Description |
|--|--|
| <i>Company Name</i> | configure the name of the company that is registered as responsible for the system that is sending the records to SPIA |
| <i>Access token</i> | enter <i>Access Token</i> to access the SPIA-PRF WebService (???systemconfig.help.spiaintegration.accesstoken???) |
| <i>Attempts</i> | set the maximum number of attempts to send a record to the SPIA-PRF server that can be 1 to 5 times |
| <i>Connection Timeout</i> | set the maximum time that will be expected for the acceptance of a connection on the server, between 0 to 60,000 milliseconds |
| <i>Reading Timeout</i> | set the maximum time that will be expected for receiving response from the server, between 0 to 60,000 milliseconds |
| External Servers Tab > Integration with CarBigData API |  <p>CarBigData API Integration</p> <p>Enable/Disable Integration: <input checked="" type="checkbox"/> Enabled <input type="checkbox"/> Disabled</p> <p>Gateway URL: <input type="text" value="https://api.carbigdata.com.br/api/v1/recogn"/></p> <p>Max. Number of Retries: <input type="range" value="1"/></p> <p>Max. Connection Timeout: <input type="range" value="10"/></p> <p>Max. Response Timeout: <input type="range" value="10"/></p> <p>Secret Key: <input type="text" value="DcP5ZcHvLdeiWZ49pngnbDW0gYayvkCc"/></p> |
| <i>Enable/Disable Integration</i> | select whether integration with CarBigData API will be <i>Enabled</i> or <i>Disabled</i> |
| <i>API URL</i> | enter the URL that will be used to access the CarBigData API |
| <i>Max. Number of Attempts</i> | set the maximum number of attempts to send a record to the server |
| <i>Max. Connection Time</i> | set the maximum time that will be expected for accepting a connection on the server |
| <i>Max. Response Time</i> | set the maximum time that will be expected for receiving response from the server |
| <i>Security Key</i> | enter server security key |

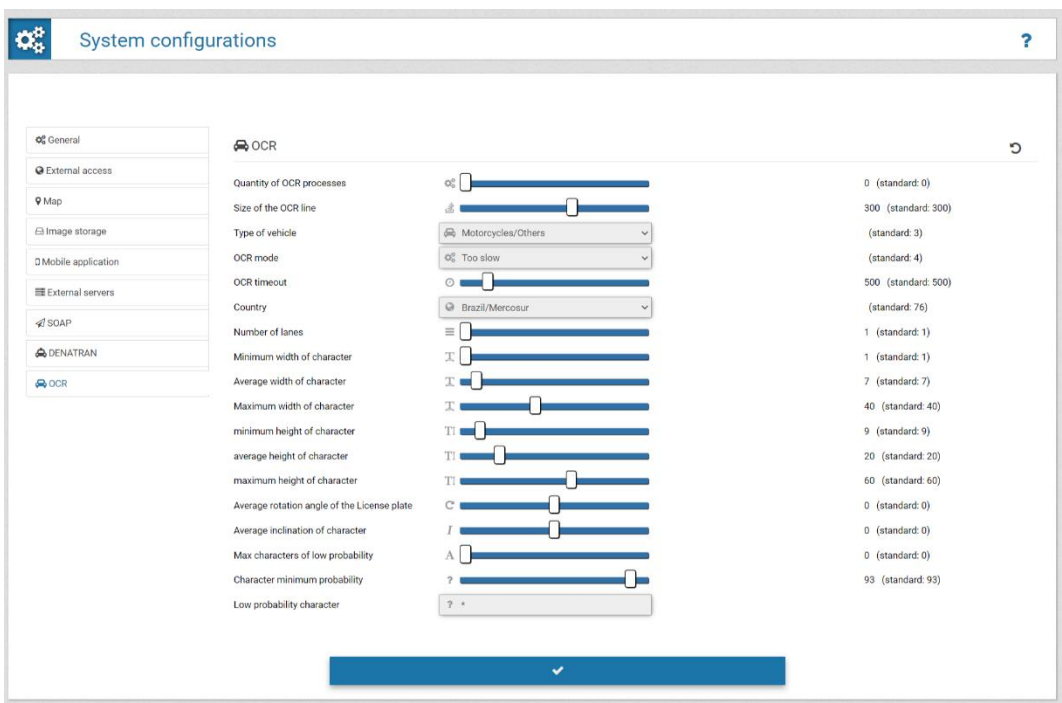

| Field | Description |
|-----------------|--|
| SOAP Tab |  <p>System configurations</p> <p>SOAP</p> <p>Enable SOAP: <input checked="" type="checkbox"/> Enabled <input type="checkbox"/> Disabled (standard: Disabled)</p> <p>Enable Authentication: <input checked="" type="checkbox"/> Enabled <input type="checkbox"/> Disabled (standard: Disabled)</p> <p>SOAP service port: <input type="text" value="8080"/> (standard: 8080)</p> <p>SOAP user: <input type="text" value="user"/> (standard: user)</p> <p>SOAP password: <input type="password" value="pass"/> (standard: pass)</p> |

| Field | Description |
|---|--|
| <i>Enable SOAP</i> | select whether the use of the SOAP interface in ITSCAMPRO will be <i>Enabled</i> or <i>Disabled</i> |
| <i>Enable Authentication</i> | select whether to <i>Enable</i> or <i>Disable</i> soap WebService authentication in ITSCAMPRO |
| <i>SOAP Service Port</i> | configure on which ITSCAMPRO port WebService SOAP will be enabled |
| <i>SOAP User</i> | set username for SOAP authentication in ITSCAMPRO |
| <i>SOAP Password</i> | set password for SOAP authentication in ITSCAMPRO |
| DENATRAN tab |  <p>The screenshot displays the 'System configurations' window with the 'DENATRAN' tab selected. The left sidebar lists various configuration categories, with 'DENATRAN' highlighted. The main area is divided into several sections: <ul style="list-style-type: none"> DENATRAN: Contains settings for 'Enables receiving data from DENATRAN' (Enabled/Disabled), 'Use FTPS' (Enabled/Disabled), 'FTP mode' (Active/Passive), 'FTP server IP/Host' (with a configuration button), 'FTP server communication port' (set to 21), 'FTP login user' (set to 'FTP server login user'), and 'FTP login password' (set to 'FTP server login password'). RENAVAM: Includes 'Renavam files directory' (set to 'Renavam files directory'), 'Frequency' (Monthly), 'Day', 'Hour', and 'Minute' dropdowns. RESTRICTIONS: Includes 'Restriction files directory' (set to 'Restriction files directory'), 'Frequency' (Monthly), 'Day', 'Hour', and 'Minute' dropdowns. Theft and robbery: Includes 'Send email', 'Generate alert', and 'Exhibit Popup' (all Enabled/Disabled). Documentation: Includes 'Send email', 'Generate alert', and 'Exhibit Popup' (all Enabled/Disabled). Search and Seizure warrants: Includes 'Send email', 'Generate alert', and 'Exhibit Popup' (all Enabled/Disabled). REFERENCE DATA: Includes 'Type of data to import' (set to 'Brand of vehicles') and a note about dragging files with reference data. </p> |
| <i>Enables receipt of DENATRAN data</i> | select whether to <i>Enable</i> or <i>Disable</i> the receipt of RENAVAL data by an FTP server |
| <i>Use FTPS</i> | select whether FTPS will be <i>Enabled</i> or <i>Disabled</i> . When enabled ITSCAMPRO will use FTPS instead of unsecured FTP |
| <i>FTP Mode</i> | select whether the FTP mode will be <i>Active</i> or <i>Passive</i> |

| Field | Description |
|---------------------------------------|---|
| <i>IP/Host FTP Server</i> | configure the IP address or HostName of the server to be sent |
| <i>FTP Server Communication Port</i> | enter the port that should be used in communication with the FTP server |
| <i>FTP Login User</i> | enter user to login to FTP server |
| <i>FTP Login Password</i> | enter password for FTP server login |
| DENATRAN Tab > RENAVAM | <div> <div>RENAVAM</div> <div> <div>Renavam files directory</div> <div>Frequency</div> <div>Day</div> <div>Hour</div> <div>Minute</div> </div> <div> <div>Renavam files directory</div> <div>Monthly</div> <div></div> <div></div> <div></div> </div> </div> |
| <i>Renavam File Directory</i> | enter the name that will be displayed in the <i>Renavam File Directory</i> |
| <i>Frequency</i> | select the periodicity between the <i>Monthly, Daily and Hourly options</i> |
| <i>Day</i> | select the day |
| <i>Hour</i> | select the hour |
| <i>Minute</i> | select the minute |
| DENATRAN Tab > RESTRICTIONS | <div> <div>RESTRICTIONS</div> <div> <div>Restriction files directory</div> <div>Frequency</div> <div>Day</div> <div>Hour</div> <div>Minute</div> </div> <div> <div>Restriction files directory</div> <div>Monthly</div> <div></div> <div></div> <div></div> </div> </div> |
| <i>Restrictions file directory</i> | enter the name that will be displayed in the <i>Restrictions file directory</i> |
| <i>Frequency</i> | select the periodicity between the <i>Monthly, Daily and Hourly options</i> |
| <i>Day</i> | select the day |
| <i>Hour</i> | select the hour |
| <i>Minute</i> | select the minute |

| Field | Description |
|---|---|
| DENATRAN Tab > Theft and Robbery | <p>Theft and robbery</p> <p>Send email <input checked="" type="checkbox"/> Enabled <input type="checkbox"/> Disabled</p> <p>Generate alert <input checked="" type="checkbox"/> Enabled <input type="checkbox"/> Disabled</p> <p>Exhibit Popup <input checked="" type="checkbox"/> Enabled <input type="checkbox"/> Disabled</p> |
| <i>Send Email</i> | select whether to <i>Enable</i> or <i>Disable</i> emailing monitoring with <i>Theft and Robbery</i> information |
| <i>Generate alert</i> | select whether to <i>Enable</i> or <i>Disable</i> the generation of monitoring alerts with <i>Theft and Robbery</i> information |
| <i>Display popup</i> | select whether to <i>Enable</i> or <i>Disable</i> the display of the monitoring popup with <i>Theft and Robbery</i> information |
| DENATRAN Tab > Documentation | <p>Documentation</p> <p>Send email <input checked="" type="checkbox"/> Enabled <input type="checkbox"/> Disabled</p> <p>Generate alert <input checked="" type="checkbox"/> Enabled <input type="checkbox"/> Disabled</p> <p>Exhibit Popup <input checked="" type="checkbox"/> Enabled <input type="checkbox"/> Disabled</p> |
| <i>Send Email</i> | select whether to <i>Enable</i> or <i>Disable</i> the sending by e-mail of the monitoring with <i>Documentation</i> information |
| <i>Generate alert</i> | select whether the generation of monitoring alert with <i>Documentation</i> information will be <i>Enabled</i> or <i>Disabled</i> |
| <i>Display popup</i> | select whether to <i>Enable</i> or <i>Disable</i> the display of monitoring popups with <i>Documentation</i> information |
| DENATRAN Tab > Search and Seizure | <p>Search and Seizure warrants</p> <p>Send email <input checked="" type="checkbox"/> Enabled <input type="checkbox"/> Disabled</p> <p>Generate alert <input checked="" type="checkbox"/> Enabled <input type="checkbox"/> Disabled</p> <p>Exhibit Popup <input checked="" type="checkbox"/> Enabled <input type="checkbox"/> Disabled</p> |
| <i>Send Email</i> | select whether to <i>Enable</i> or <i>Disable</i> the e-mailing of monitoring with <i>Search and Seizure</i> information |
| <i>Generate alert</i> | select whether the generation of monitoring alerts with <i>Search and Seizure</i> information will be <i>Enabled</i> or <i>Disabled</i> |
| <i>Display popup</i> | select whether to <i>Enable</i> or <i>Disable</i> the display of monitoring popups with <i>Search and Seizure</i> information |

| <i>Mode</i> | Select server mode |

Date/Time Settings

The correct functioning of ITSCAMPRO requires that the date and time setting be checked, as the statistical information produced considers the system date and time setting.

Date / Time configurations
?

Time zone

Brasilia Time (America/Sao_Paulo)

Date / Time Server

20/12/2022 16:17

Synchronism Date/Time

Date / Time Manual configuration

Synchronism type

NTP (Proprietary server)

NTP server

200.160.0.8

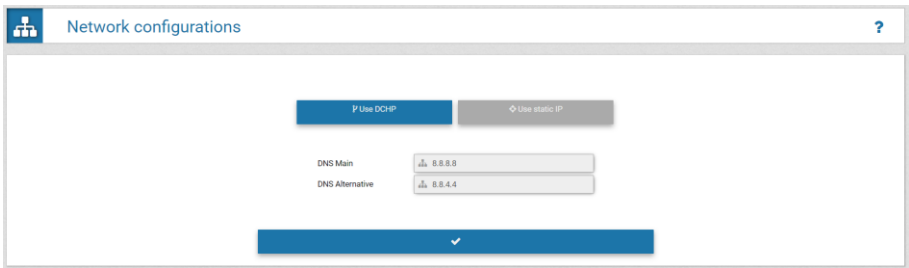

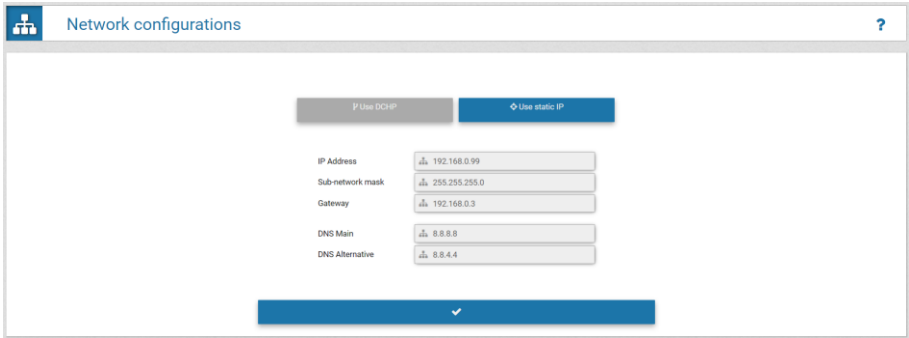

✓

| Field | Description |
|--------------------------------------|--|
| <i>Timezone</i> | set time zone The ITSCAMPRO Time Zone setting allows you to ensure that date/time conversions are performed correctly |
| <i>Synchronism Date/Time</i> | <div> <div>Synchronism Date/Time</div> <div>Date / Time Manual configuration</div> </div> <div> Synchronism type <div>NTP (Proprietary server)</div> </div> <div> NTP server <div>200.160.0.8</div> </div> |
| <i>Type Synchronism</i> | select the type of synchronism that will be used. For ITSCAMPRO we can use NTP with the default OS server or use NTP with a proprietary server |
| <i>NTP Server</i> | enter NTP server configuration port, if selected to use a proprietary NTP server |
| <i>Manual Setup Date/Time</i> | <div> <div>Synchronism Date/Time</div> <div>Date / Time Manual configuration</div> </div> <div> Date <div>20/12/2022</div> </div> <div> Hour <div>16:17</div> </div> |

| Field | Description |
|-------------|--|
| <i>Date</i> | select through the calendar the correct date or configure the Server Date by typing through the keyboard |
| <i>Hour</i> | enter the correct time so that the server clock is synchronized with servers |

Network Configurations

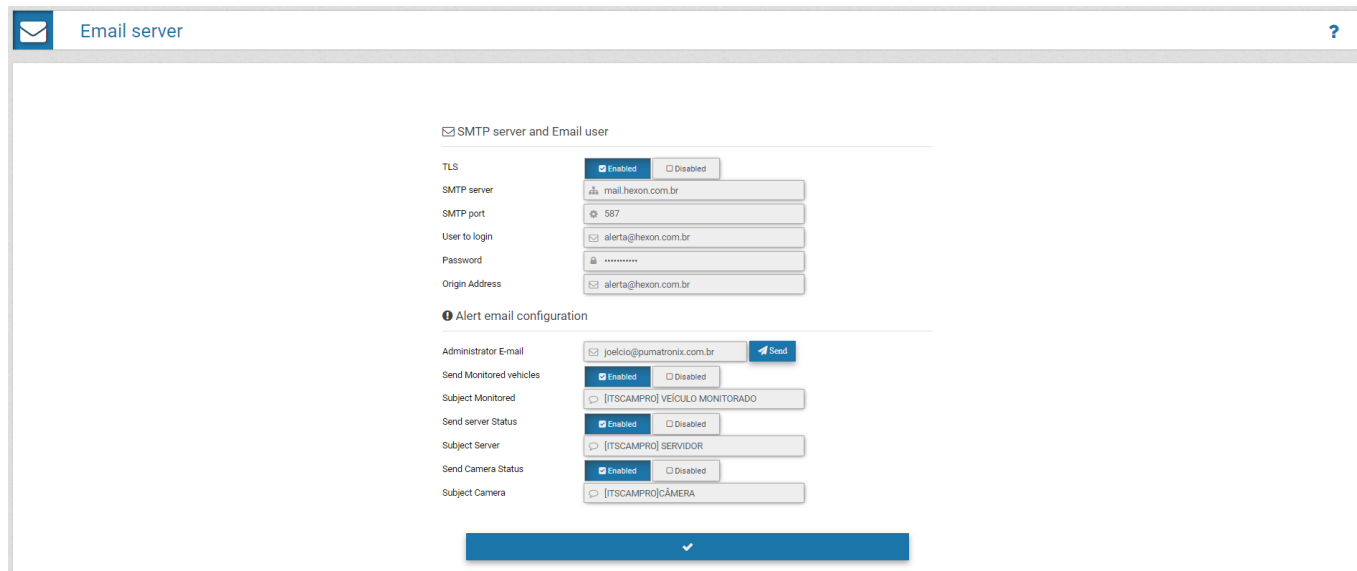

In this section you can change ITSCAMPRO server network settings. After saving the settings, the server restarts and the page reloads after 40 seconds.

| Field | Description |
|--------------------------|--|
| Use DHCP Tab |  <p>DHCP (Dynamic Host Configuration Protocol) Select this option to determine the use of dynamic host configuration. In this case, IP addresses, subnet mask and gateway will be automatically assigned to the server</p> |
| <i>Primary DNS</i> | enter Primary DNS |
| <i>Alternate DNS</i> | enter <i>Alternate DNS</i> |
| Use Static IP Tab |  <p>Static IP Select this option to manually assign IP addresses, subnet mask and gateway to the server</p> |
| <i>IP address</i> | enter Address |
| <i>Subnet Mask</i> | enter <i>Subnet Mask</i> |
| <i>Gateway</i> | enter <i>Gateway</i> |
| <i>Primary DNS</i> | enter Primary DNS |
| <i>Alternate DNS</i> | enter <i>Alternate DNS</i> |

The DNS fields assign addresses to domain name servers. The value(s) can be exchanged if using another server(s) and if the system is operating without internet access it is possible to leave the fields blank.

E-mail Server

One of the functionalities of ITSCAMPRO is the sending of e-mail with alerts to registered users. This requires configuring the SMTP Server and ITSCAMPRO Email User and which users should receive the alerts. These settings are available in the *Mail Server* menu.

| Field | Description |
|--------------------------------|---|
| <i>TLS</i> | select whether TLS will be <i>Enabled</i> or <i>Disabled</i> |
| <i>SMTP Server</i> | configure SMTP server address for sending emails by ITSCAMPRO |
| <i>SMTP Port</i> | enter SMTP server configuration port |
| <i>Login User</i> | enter user to login to server |
| <i>Password</i> | enter password for server login |
| <i>Source Address</i> | configure email address that should be displayed as the source of the email |
| <i>Admin Email</i> | configure list of emails that should receive administrative messages |
| <i>Send Monitored Vehicles</i> | select whether to <i>Enable</i> or <i>Disable</i> the sending of monitored vehicle emails |
| <i>Monitored Subject</i> | enter subject that will be sent in the monitored vehicle alert email |
| <i>Send Server Status</i> | select whether to <i>Enable</i> or <i>Disable</i> sending server status emails |
| <i>Server Subject</i> | enter subject that will be sent in the server status alert email |
| <i>Send Camera Status</i> | select whether to <i>Enable</i> or <i>Disable</i> the sending of status emails from capture devices |
| <i>Camera Subject</i> | enter subject that will be sent in the capture device status alert email |
| <i>Dangerous Cargo Subject</i> | enter subject that will be sent in the capture device status alert email |

Reinitialize server

Reinitialize

System Restore: When restoring a database in ITSCAMPRO, all information that was stored on the equipment (including internal references to the images) will be overwritten.

Factory Restore: When you restore an ITSCAMPRO installation to the factory version, all information that was stored (including images) will be erased.

ITSCAMPRO Restart: Requesting a restart of ITSCAMPRO causes all connections to the image capture devices to be interrupted during the process and there may be a loss in vehicle recognition during this period.

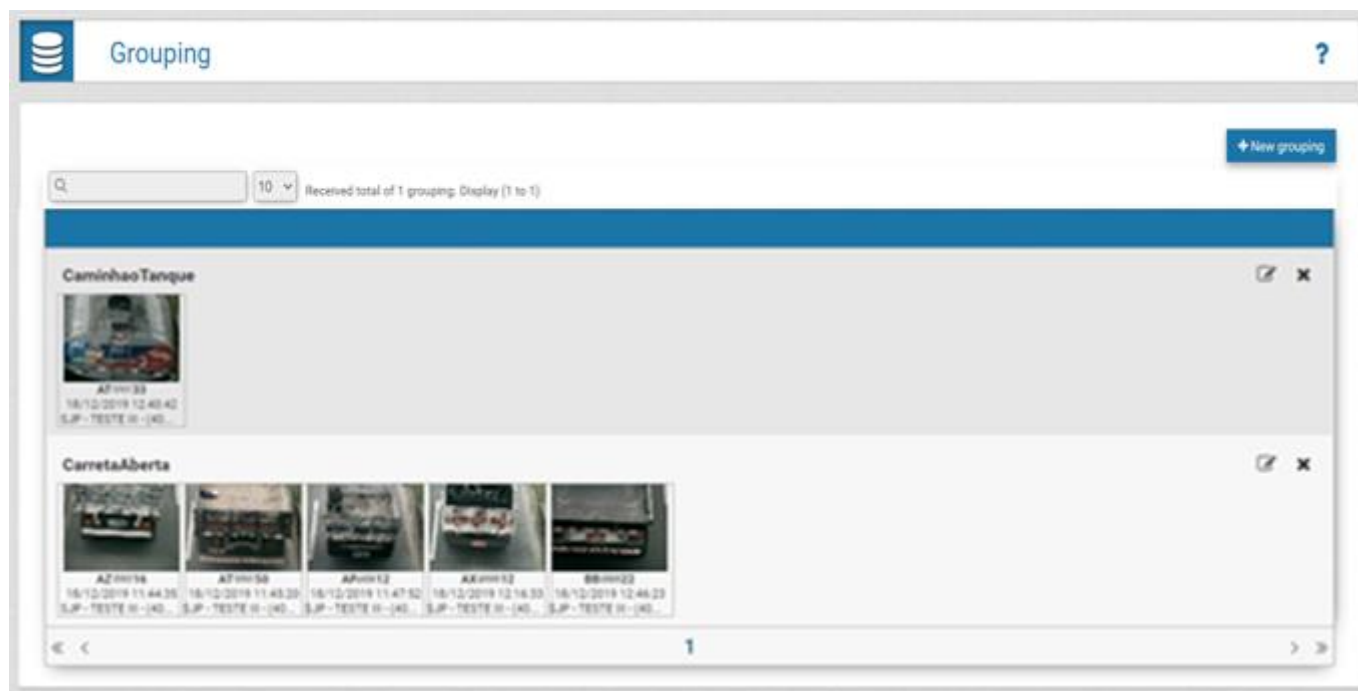

| Field | Description |
|--------------------------------|--|
| <i>Software Upgrade</i> | for updating a software package when a new version is made available. ITSCAMPRO has four software packages, and you can update them individually. The process is fully done in the background after sending the update file. |
| <i>System Logs</i> | when assistance is required, information about the actions taken on the system can be downloaded to be sent to Pumatronix Technical Support. ITSCAMPRO has a complete log of all operations done by the system in the background. This log file has the main function of assisting the development team in the analysis of ITSCAMPRO anomalies |
| <i>Database Backup/Restore</i> | <i>Backup:</i> downloads a backup of the complete system database. This backup is saved in a proprietary format and can only be used by ITSCAMPRO <i>Restore:</i> imports a backup file with predefined settings |
| <i>System in Maintenance</i> | for updating a software package, it is recommended to <i>put System in Maintenance</i> so that all accesses and changes to the system are blocked |
| <i>Restart Server</i> | use this option when the system is not operating normally |
| <i>Factory Reset</i> | settings are reset to factory default, but all data will be erased from the memory |

3. Registrations Menu

Groupings

The records stored in the database can be more easily located when added to the *Groupings*, which consists of a common identifier that can be added to the description of the record, making it easier to search, especially when using the COMPARE function.

Images associated with a grouping are not removed by the automatic disk space management process.

To add a new grouping, click *+New Grouping* and the screen displays the field to insert a new vehicle identifier:

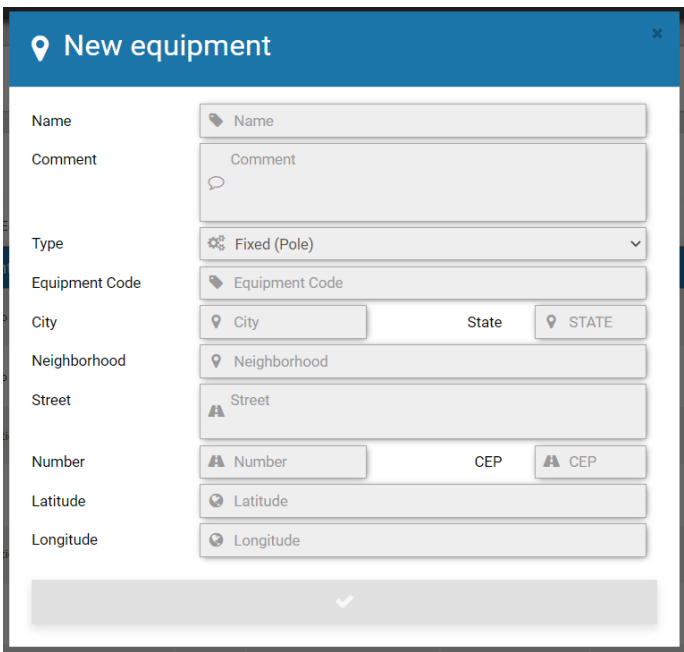

Equipment

A piece of equipment can be *Fixed (Pole)*, *Static (Tripod)*, *Mobile (Vehicles)*, *Toll Station* or *Mobile*. It may contain a ALU (Arithmetic-Logic Unit) containing software that commands the devices of each lane or a group of devices that have the same geographical location.

| Equipment | | | | | | | | | |
|---|---|-------|-------------------------|---------------|-----------|------------|------------------|---------|--|

When clicking on *+New Equipment*, the fields for registration are available:

| Field | Description |
|---|---|
| |  |
| <i>Name</i> | enter equipment name in the system (required field) |
| <i>Comment</i> | enter additional equipment information |
| <i>Type</i> | select the type of equipment that can be <i>Fixed (Pole)</i> , <i>Static (Tripod)</i> , <i>Mobile (Vehicles)</i> , <i>Toll Station</i> or <i>Mobile (mandatory field)</i> |
| <i>Equipment Code</i> | enter equipment identification code for FTP |
| <i>Address (City/State/Neighborhood/Street/Number/Zip Code)</i> | enter information of the address where the equipment is installed, usually of the fixed type |

| Field | Description |
|------------------|--|
| <i>Latitude</i> | enter latitude where the equipment is installed |
| <i>Longitude</i> | enter longitude where the equipment is installed |

Cameras

Equipment that is connected as customers in ITSCAMPRO can be mobile, fixed, or static, but the final identification of the equipment is done through the capture device. Each capture device may contain different settings depending on the type of equipment to which it is linked in the register. In this screen it is possible to maintain the registrations of the capture devices and view in a simplified way the state of communication of ITSCAMPRO with the capture device.

| <i>COMPARE - Calculate descriptors</i> | select <i>Active</i> or <i>Inactive</i> for the calculation of the descriptors of the images, a requirement for the use of the <i>COMPARE</i> Similarity Search functionality |
| <i>COMPARE - Region of Interest</i> | select <i>Active</i> or <i>Inactive</i> to define a region of interest for image analysis in <i>Similarity Search</i> , which considers the plate position |

| Field | Description |
|-------------------------------|--|
| <i>Region of Interest Tab</i> |  <p>In the capture device configuration, when the COMPARE functionality is selected, a <i>Region of Interest</i> can be defined in the image to perform the capture. The adjustments for the region consider the optimal size and position of the plate in the image.</p> |

Monitored Vehicles

The ITSCAMPRO system supports integrations with vehicle safety and monitoring systems. When registering on *Monitored Vehicles*, the vehicle's license plate must be specified, and a description can be included. This registration can be performed by vehicle plates, individually, or a *CSV* file containing all the listed plates can be inserted in the system, by clicking on the *Import* button. When there is the identification of a vehicle license plate registered for monitoring, the system can generate visual and audible alerts and issue an email with the identification data. Visual identification alerts cannot be disabled, while audible alerts can be configured. For the functionality of sending email with alerts to work correctly, a valid SMTP server (mail sending server) must be configured in ITSCAMPRO. This configuration is done through the **"System > Email Server"** option.

| <i>Expiration</i> | search by expiration date |
| <i>E-mail</i> | search by status of sending by emails |
| <i>Type</i> | search by <i>Public</i> or <i>Private</i> |
| <i>Group</i> | search by group to which the tracked vehicle record belongs |

To register a vehicle for monitoring, click *+New Monitored Vehicle* and the screen shows the fields to fill in:

| Field | Description |
|----------------------|--|
| |  |
| <i>License Plate</i> | enter monitored vehicle plate data |
| <i>Group</i> | select the registered group that will have access to monitoring |
| <i>Base Data</i> | create an identification of a database to which the monitoring belongs |
| <i>Description</i> | enter monitoring description |
| <i>Send Email</i> | configure whether to send the vehicle detection alert monitored by e-mail, selected from the options: Do not send, Send to Group, Send to Addresses or Send to Group and Addresses |
| <i>Type</i> | select the type of vehicle registration if <i>Public</i> or <i>Private</i> |
| <i>Audible Alert</i> | configure whether to issue the audible alert at the time of detection of the monitored vehicle |
| <i>Pop-Up</i> | select whether to display the pop-up window when detecting the monitored vehicle |
| <i>Expiration</i> | select if the monitoring should expire |
| <i>Expires at</i> | select through the calendar the date on which the monitoring should expire |

If the user already has a list or database with vehicles that must be monitored, they can import this list in a simple and automated way into the system. Click *Import* and the screen displays the fields to fill in:

| Field | Description |
|-------------------|---|
| |  <p>ITSCAMPRO can import CSV type files. The format of the lines must be PLATE, Description, SendEmail, Alarm, Popup. SendEmail, Alarm and Popup fields are optional and if they are not in the file rows a default value will be used.</p> |
| <i>Group</i> | select the group with permission to access the list of monitored vehicles |
| <i>Base Data</i> | create a database ID for the watchlist |
| <i>Expiration</i> | select if the monitoring should expire |
| <i>Expires at</i> | select through the calendar the date on which the monitoring should expire |

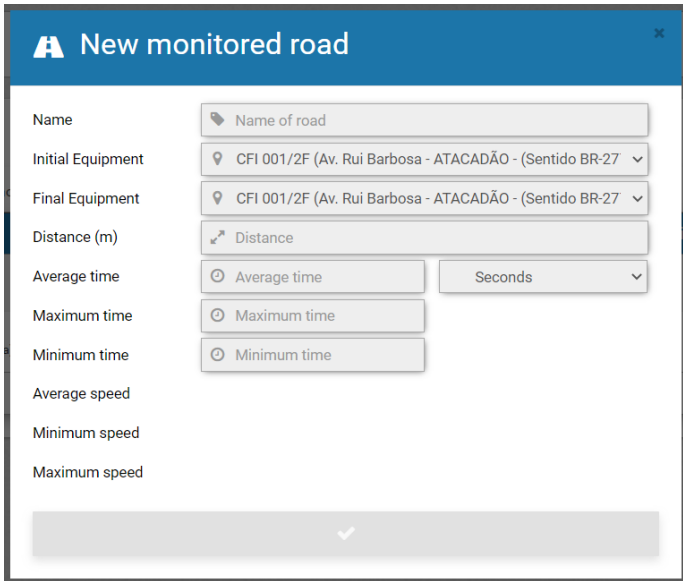

Monitored Sections

When using more than one equipment in a facility, ITSCAMPRO makes it possible to register the information of the route traveled by a vehicle, when defining the initial equipment and the final equipment for vehicle detection. With the information of the estimated Average, Maximum and Minimum times, and the *Distance* to travel the stretch, the speeds to travel the route are estimated.

The *Monitored Section* is used as a basis for generating the *Time and Speed* report in the *Reports* menu. In the *Similarity Search*, the search is optimized by presenting the data of the record made in the *Equipment* of a stretch and the *Date/Time* referring to the captures made.

4. Reports Menu

Vehicle Monitoring

The *Vehicle Monitoring Report* is an important tool to assist the user in searching for captures of monitored vehicles. Every time a vehicle registered with monitoring is detected by any system capture device a log is generated. ITSCAMPRO allows the export of results in *CSV* or *PDF* format.

| Filter | Description |
|----------------------|---------------------------------|

Correlations

The *Correlations Report* is a tool for checking vehicle behavior patterns. For example, it is possible to make a search by correlating the captures of two or more equipment at a given time or the same equipment at different times. The result of this correlation will present all vehicle captures that were taken at the points and at the indicated interval.

Captures

The *Capture Report* is a tool that allows the user to search the ITSCAMPRO system database through filters in the interface and present the result of this search to the user. ITSCAMPRO allows you to transform the search results into a *PDF* report and export them into a comma-separated values (*CSV*) file. However, in the *CSV* file, the images of the records are not exported.

Similarity Search

Similarity Search is a tool available in ITSCAMPRO that allows the search by images like vehicles registered and stored in ITSCAMPRO and in a database.

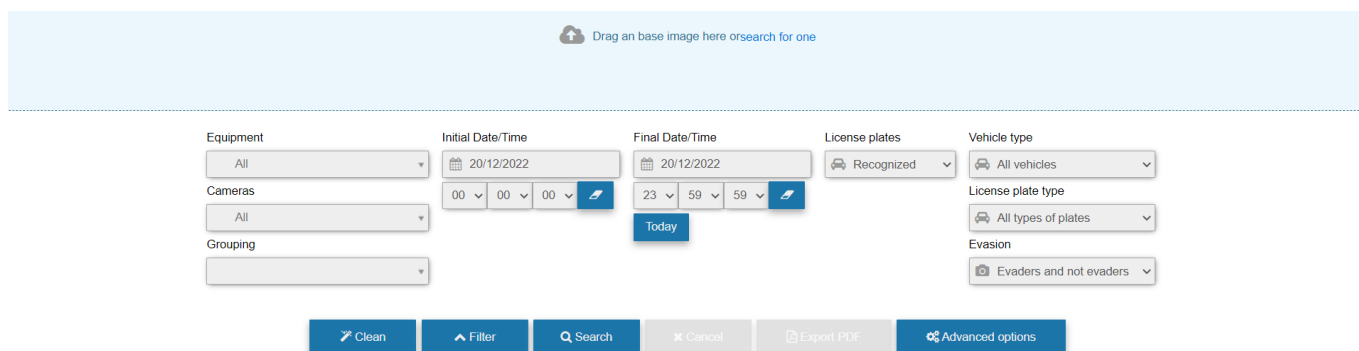

This functionality is released in the *COMPARE* module, which requires the upload and installation of the license in the ITSCAMPRO software, adaptation or installation of the image capture devices and the activation of the module, connecting the Hardkey to the processor, which limits the number of devices that can be configured.

The images generated in the *capture report* can be used as a search basis, performing the search of the report and in the *Similarity* field, click on the magnifying glass that contains the *Search by images similar to this function*:

The screenshot shows the 'Registers Report' interface. At the top, there are buttons for 'Clean', 'Filter', 'Search', 'Export CSV', and 'Export PDF'. Below these, a status bar indicates 'Received total of 33.352 captures. Presenting (1 up to 10)'. A table with the following columns is displayed: ID, Date/Time, Equipment, Camera, License Plate, Forwarded, Grouping, Photo, and Search for similarity. The first row of data shows ID 7.589.868, Date/Time 20/12/2022 16:30:53, Equipment CFI 005/2F Av. Ru Barbosa X Rua Colombo - (sentido Centro), Camera ITSCAM600, License Plate HER1519, Forwarded Yes, and a photo thumbnail. A magnifying glass icon in the 'Search for similarity' column is highlighted.

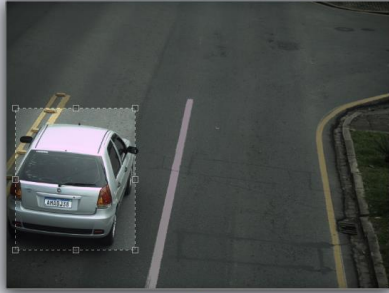

External images can also be used via the *Reports > Similarity Search* menu by dragging or selecting the image:

The screenshot shows the 'Similarity Search' interface. At the top, there is a text box with a cloud icon and the text 'Drag an base image here or search for one'. Below this, there are several filter sections: 'Equipment' (All), 'Cameras' (All), 'Grouping' (All), 'Initial Date/Time' (20/12/2022), 'Final Date/Time' (20/12/2022), 'License plates' (Recognized), 'Vehicle type' (All vehicles), 'License plate type' (All types of plates), and 'Evasion' (Evaders and not evaders). At the bottom, there are buttons for 'Clean', 'Filter', 'Search', 'Cancel', 'Export PDF', and 'Advanced options'.

In situations where the additional monitoring point has a different framing from the base image, it is possible to delimit a *Region of Interest* by clicking on the image and dragging until the desired region is defined, as shown in the example below. This function reduces the search by similar descriptors only in the portion delimited on the image that will be used as a base, optimizing the performance of COMPARE:

Choose base image for the search.
 Obs.: It is possible to define a "region of interest" on the image.

Traffic

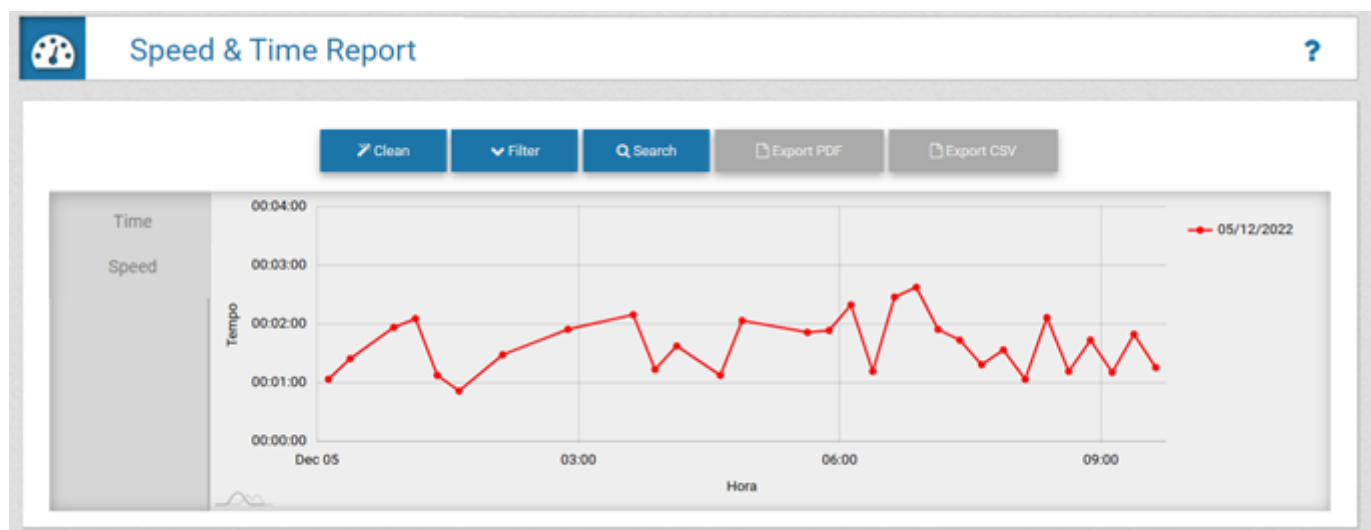

The Traffic Report is a tool in which the user can generate graphs with the number of vehicles captured in an equipment in the period corresponding to one week (7 days). The report can be exported in *PDF* or *CSV* format.

| Filter | Description |
|-----------------------|---|
| <i>Equipment</i> | search by registered equipment |
| <i>Cameras</i> | search by registered capture devices |
| <i>License Plates</i> | search by plate status by filtering by <i>Recognized</i> or <i>Unrecognized</i> or <i>All</i> |
| <i>Start Date</i> | search by start date and/or time |
| <i>End Date</i> | search by end date and/or time |

Time and Speed

The Time and Speed Report is a tool in which the user can generate graphs with the average travel time and the average speed of a monitored section. The report can be exported in *PDF* or *CSV format*.

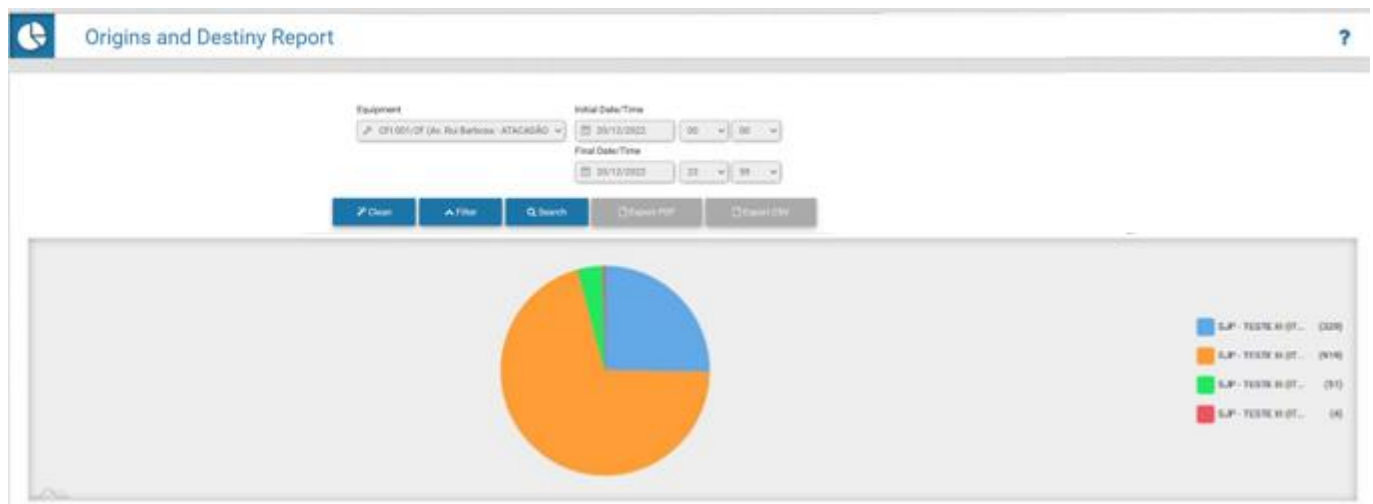

| Filter | Description |
|----------------|------------------------------|
| <i>Section</i> | search by registered section |

| Filter | Description |
|----------------------|---|
| <i>Start Date</i> | search by start date |
| <i>End Date</i> | search by end date |
| <i>Cutt-off Time</i> | sets the <i>Cutt-off Time</i> , which is equivalent to the maximum value that a route can take, to remove from the calculation the vehicles that, for example, stopped during the route |

Origin and Destination

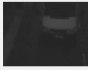

The Origin and Destination Report presents in graphic format the number of records with the same plate read and the percentage of vehicles per destination equipment, identified by the color in the caption. The report can be exported in *PDF* or *CSV format*.

| Filter | Description |
|------------------------|---|
| <i>Equipment</i> | search by equipment that will be the source of the data generated in the report |
| <i>Start Date/Time</i> | search by start date and/or time |
| <i>End Date/Time</i> | search by end date and/or time |

Changed Plates

Upon receiving a capture in the system, the user can change the plate of the capture that was received. This change may be necessary if the plate detection algorithm is unable to recognize the plate number due to some problem in the image or because the plate was partially covered up. The *Changed Plates Report* displays the date/time information, equipment, capture device, plate, and the changes that have been made to the plate. The log information can be better viewed by clicking on the capture list image.

System Log

Since ITSCAMPRO is a system that supports multi-users and each with a specific group of equipment and features, a log where it is possible to verify and audit the actions of users is extremely important. The *System Log Report* displays the Date/Time, User and a Message information displaying what action has been taken.

| System Log Report | | | | | | | | | | | | | | | | | | | | |

5. Search by Plate

Plate Search is a tool to search for a specific plate or for a partial plate stored in the database, which can be quickly performed in the Plate Search option, always visible in the top menu. Click the field, enter the desired plate, and press *Enter* to perform a search.

There are two ways to perform the search using a partial plate:

- To perform a search varying only one position, use the wildcard character "?". For example: if you search "BCY28?1" the system will search for all the plates only changing the position where the "?" is.
- To perform a search without specifying position, use the wildcard field "*". For example: if you search "BCY*" the system will fetch all boards starting with "BCY". There must be at least 3 non joker characters.

The search screen for similar plates opens in a new browser tab and initially displays only the list of similar plates found in the records. When selecting one of the similar plates found, the information is listed indicating the *Equipment* and *Camera* responsible for the records for this plate, along with the captured image.
